DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim s 36-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 36 recites the limitation "the plurality of clustered building blocks" in lines 6-7. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 13, 24, 36, 37, 39 are rejected under 35 U.S.C. 102(e) as being anticipated by Ma (6,157,643).

With regards to claim 13, 24, Ma teaches a scalable network switch (Fig. 2), said scalable network switch comprising a predetermined number of switch building blocks interconnected in a meshed configuration (Fig. 2), wherein at least one of said predetermined number of switch building blocks comprises:

at least one data port interface(Fig. 2, SE1) supporting a plurality of ports for transmitting and receiving data, and a predetermined number of stack link interfaces(SE1 has links connecting it to SE2 blocks) configured to transmit data between one of said predetermined number of building

blocks and another of said predetermined number of building blocks(Fig. 2, SE1 uses the links to transmit data to SE2).

With regards to claim 36, Ma teaches a method of stacking network switches, said method comprising:

providing a plurality of clustered switch blocks (Fig. 2), and interconnecting each of said plurality of clustered switch blocks(Fig. 2, interconnecting links), wherein interconnection of the plurality of clustered building blocks forms a stack of clustered blocks(Fig. 2, multistage switch elements forms clustered blocks).

Claim 37 is rejected because Fig. 2, 8 of Ma is an example of a meshed configuration. Each block is connected to every other block.

Claim 39 is rejected because Ma teaches a method for handling packets (ATM) in network switch, said method comprising the steps of:

receiving a packet in a clustered network switch; (col. 4 lines 34-39) determining a destination address of the packet from a lookup operation in a common table (necessarily present because to switch need to know which output to direct the packet); and forwarding the packet to the destination address determined from the lookup operation. (Fig. 2, the

output element to which a packet is directed is dependent on the destination address in the packet).

Allowable Subject Matter

Claims 1-12 are allowed.

Claims 14-23, 25-35, 40-42 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
